

PRESS RELEASE

Hug Engineering to Exclusively Supply Major Engine Manufacturer with IMO Tier III Emission Reduction

Elsau (Switzerland), July 2019

Hug Engineering announced to have signed a "5-Year-Direct Supply Agreement" with a major engine manufacturer last May for the supply of IMO Tier III solutions for several engine types.

The Hug-Engineering SCR systems have multiple configuration options in order to have an optimal fit with the engine room layout.

Operators will have the flexibility to run at IMO III mode when required and switch to IMO II levels when allowed by pausing the SCR system while sailing. This flexibility minimizes urea consumption to the limit.

"The choice adding our proven SCR technology to their established engine family is an important reward for us. We are happy to deepen our great co-operation by supporting this OEM in meeting regulatory emission standards" says Peter Zijdemans, Vice President Account Management of Hug Engineering. "It shows again how we are able to help engine manufacturers with our know-how in emission technology with sustainable and economic systems".

IMO Tier III certified engines are compulsory for entering NOx Emission Control Areas (NECA zones) and are mandatory in these areas for vessels built after January 1, 2016.

Hug Engineering has the technical know-how and, with its parent company Faurecia, the financial backbone and leverage to ensure a constant power of innovation on the market.

ABOUT HUG ENGINEERING AG

Founded in 1983, Hug Engineering AG based in Elsau/Switzerland is today acknowledged as one of the leading manufacturers of exhaust gas purification systems for diesel- and gas-powered engines with high horsepower. The company provides efficient solutions and customized systems. This success is based on focused engineering, research and development, and an extensive product portfolio consisting of high-end exhaust gas purification systems ranging from standardized modules to systems tailored to specific customer requirements.

Hug Engineering AG is a subsidiary of Faurecia, a global development partner and a leading supplier for Sustainable Mobility. For more information, visit: www.hug-engineering.com
