

PRESS RELEASE

Hug Engineering partners with DeAngelo Marine Exhaust, Inc. to become a certified supplier and service provider for Hug Engineering's emission aftertreatment systems for the U.S. yacht market.

DeAngelo Marine Exhaust, Inc. has been a leader in exhaust design, fabrication, service, and installation worldwide for over 35 years. With a vertically integrated production facility, highly skilled technical labor force and a strong sales network embedded in the "yachting capital of the world", Fort Lauderdale, Florida.

Hug Engineering, a Faurecia owned company, manufacturers of emission aftertreatment systems for a variety of market segments including Marine applications. Hug Engineering offers service worldwide out of their six locations and have over 1000 systems running today on marine vessels globally. De Angelo Marine Exhaust, Inc. is an excellent match to the ambitions for growth for Hug Engineering in the US market.

The relationship will benefit from the speed to market of a new Hug Engineering Nauticlean® Electrical Diesel Particulate Filter solution that is currently in the final stages of development and will be deployed for sea trials in the Fall of 2021. DeAngelo Marine Exhaust, Inc. shares its network with Hug Engineering: the company holds multiple locations throughout South Florida and is the preferred Marine Exhaust Manufacturer for such renowned marinas as Lauderdale Marine Center and Rybovich Superyacht Marina. In addition to share its professional and reliable services, Hug Engineering will provide its innovation including the Diesel Particulate Filter (DPF) and Selective Catalytic Reduction (SCR) aftertreatment systems for generators and propulsion engines.

"The partnership leverages the strengths of both teams, enabling full integration of the exhaust and emission solutions for our joint customers, and places Hug Engineering strategically at the heart of the Eastern seaboard yachting capital to service customers with first-fit, retro-fit and aftersales support", according to Anthony Badolato, General Manager of Hug Engineering.

The team at DeAngelo shares the same vision of customer sales support and providing innovative solutions for the space constraints in today's modern engine rooms. *"With collaboration on engineered solutions, the partnership enables speed and agility to fit the needs of demanding customers for soot control, as well as emission compliance for IMO III and beyond",* shared Justin Montes, CEO of DeAngelo.
