Aftertreatment for gas and Diesel engines

hugengineering.

benefits

- Global regulations & local air permit compliant for heavy duty applications
- Reduction of HAPs, NOx, CO, HCs and ammonia slip control
- Modular system feasible for fossil & renewable fuels
- Standard and custom solutions to meet CAPEX and OPEX requirements of packagers, EPCs and final users/operators

technical description

- Automation equipment portfolio widely diversified so to suit different technical/commercial scenarios
- Mechanical equipment appropriate for required maintenance processes and schedule (MTBO, serviceability, safety, etc..)
- Catalytic materials and auxiliary systems running properly also with low-spec fuels and unprocessed/stranded streams

applications

- Co-generation heat and power
- Biofuel plants
- Off-grid power plants
